

Adhera™ Fine Line Backing

Adhera™ Fine Line Backing is a new, light-weight flexible tape backing providing both exceptional smoothness and superior MD elongation properties ideal for very fine paint line applications. Expera makes these unique properties possible by leveraging a proprietary manufacturing process.

Performance

- **Tear Strength:** Demonstrates very high cross machine direction tear for its weight, derived from the unique processing to achieve elongation.
- **Tensile Strength:** Higher than traditional crepe tape backing at similar weight. The addition of latex during saturation will build on the good tensile strength of the base paper.
- **Saturability & Processing:** Similar high speed performance to traditional Adhera™ crepe and flatback papers during latex saturating, release coating, and adhesive coating.
- **Softness, Drape or Feel:** The Adhera™ Fine Line Backing provides a flexible finished tape. Note: The feel may be influenced by the saturant and coating.

Benefits

- Development of very fine paint line masking tapes.
- Uniform surface results in efficient coating operations.
- Targeted for splicing and web transfer applications requiring a thin, 2-sided tape with high strength and good elongation.
